

Logging in

Your child has been set up with access to Adapt Primary Maths from Collins. They will need to access Adapt in one of two ways:

1. Via email

- If your child has access to a school email address, they will receive a welcome email, containing a link to set up their account.
- Clicking this link takes you to a page where you will be required to choose and confirm a password for Adapt.
- Clicking SET PASSWORD will log you straight in to the Adapt platform.

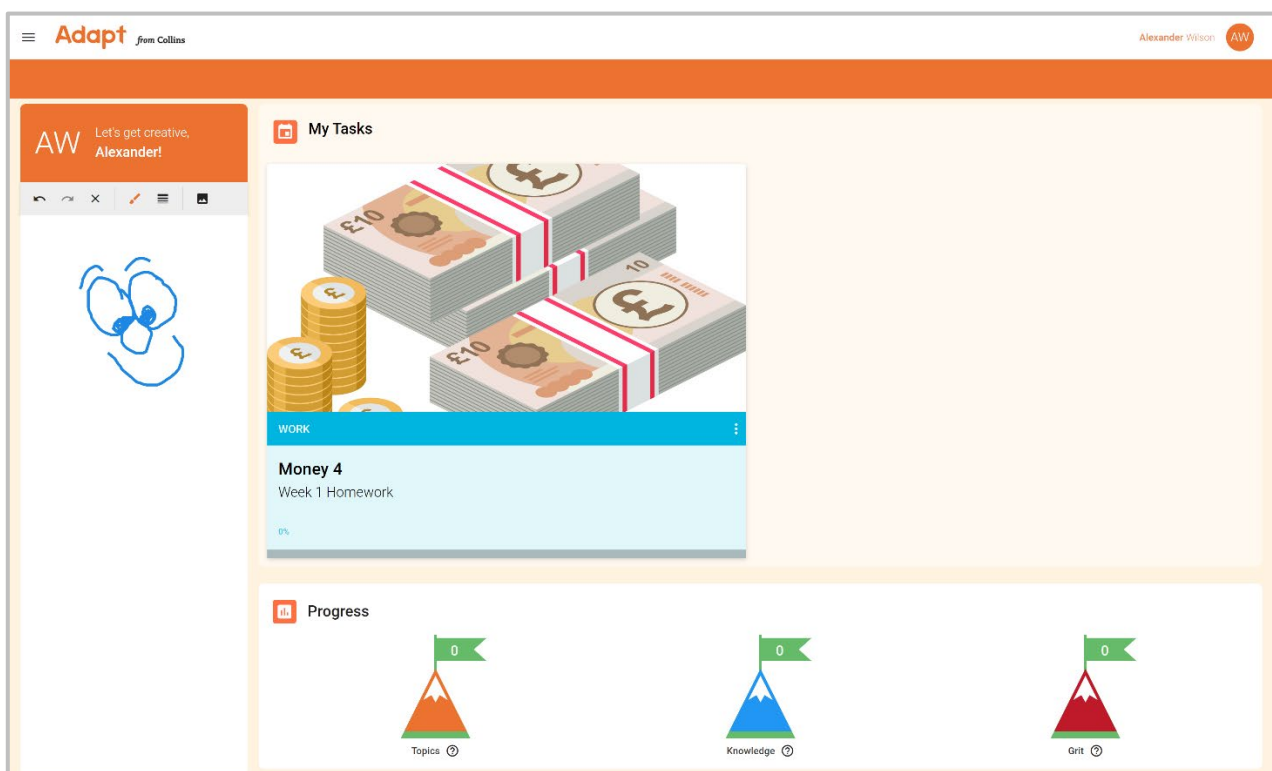

2. Via username and password

- Alternatively, your child may be given a username and password by their teacher.
- In that case, go directly to the login page <https://pupil.collinsadapt.co.uk> and use those details to access Adapt.

Pupil dashboard

When your child first logs in, they will land on the pupil dashboard, shown below. Any tasks assigned to them by their teacher will appear under "My Tasks" (in this case "Money 4").

Completing tasks

Clicking on a card from the dashboard will launch the task. The first page your child sees will be a summary of the task.

After the summary screen, a question will be displayed. For every question in Adapt, the learner is required to give both their answer and their confidence level (“I know it”, “Think so”, “Not sure”, “No idea”) by selecting one of the owl icons. Both the answer and the confidence level will determine what the learner sees next, with each learner’s journey through the task unique to them.

The screenshot shows the 'Money 4' task interface. On the left, a 'Tutor' panel contains an owl icon and the question: 'How many pence in 7 pounds and 17 pence?'. Below the question are controls for 'Autoplay' (set to 'On') and a 'HIDE TEXT' slider. The main task area displays the equation $£7.17 = 71.7p$ and a red banner that says 'Not there yet...'. Below the banner, it shows 'Your Answer: 71.7p' (marked incorrect with a red X) and 'Correct Answer: 717p'. A 'Learn more here:' section is active, showing 'Pounds to pence'. A 'NEXT' button is visible. On the right, a progress indicator shows a mountain graphic with a 12% flag.

After submitting any answer, the learner can select “Learn more here” to find out more about the topic. After getting an answer wrong, they can select “WHY?” to find out why it was wrong.

As well as questions, learners will also see explainers for each topic they encounter. Once they have read (or listened to) the explainer, they will need to select their confidence level for the topic.

The screenshot shows the 'Money 4' task interface with an explainer. The main area is titled 'Pence to pounds' and shows the conversion of $£0.55$ to $55p$ using a $\div 100$ operation. A red arrow points from the decimal point in $£0.55$ to the $55p$ result. Below the main area are four owl icons representing confidence levels: 'I KNEW', 'GOT IT NOW', 'THINK I GOT IT', and 'I DON'T GET IT'. A 'REPORT A MISTAKE' button is also present. On the right, a progress indicator shows a mountain graphic with a 16% flag.
